**Ornamental Features**

Colorstar Flamingo Pink Weigela is covered in stunning clusters of hot pink trumpet-shaped flowers along the branches from late spring to late summer. It has attractive lime green deciduous foliage which emerges yellow in spring. The pointy leaves are highly ornamental but do not develop any appreciable fall color.

**Landscape Attributes**

Colorstar Flamingo Pink Weigela is a multi-stemmed deciduous shrub with a shapely form and gracefully arching branches. Its relatively coarse texture can be used to stand it apart from other landscape plants with finer foliage.

This shrub will require occasional maintenance and upkeep, and should only be pruned after flowering to avoid removing any of the current season's flowers. It is a good choice for attracting hummingbirds to your yard. It has no significant negative characteristics.

Colorstar Flamingo Pink Weigela is recommended for the following landscape applications;

- Accent
- Mass Planting
- Hedges/Screening
- General Garden Use

**Planting & Growing**

Colorstar Flamingo Pink Weigela will grow to be about 4 feet tall at maturity, with a spread of 4 feet. It has a low canopy. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 30 years.

This shrub should only be grown in full sunlight. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America.
